

TAQA Arabia

Industrial Clients

Integrated Energy & Utility Solutions • Jan 2026

A World of Energy, Delivered End-to-End

- Founded in 2006 and listed on the EGX since 2023, TAQA Arabia is Egypt's largest private-sector energy and utility developer.
- Across four divisions — Gas, Power, Petroleum and Water — TAQA finances, builds, owns and operates the utility backbone of residential communities, industrial zones and touristic destinations.
- For an industrial developer, that means one accredited partner with a proven delivery record can supply gas, power, water, Steam under a single relationship

Active member of the International Gas Union (IGU)

Accredited by the IGEM (Institution of Gas Engineers & Managers)

Gas

- Gas distribution & EPC networks
- NGV stations & car conversion
- Mobile CNG & LNG (virtual pipeline)

Petroleum

- Oil-marketing stations & terminals
- Lubricants retail & distribution
- Bulk fuel storage & logistics

Power

- Generation & distribution (+1,600 MVA)
- Renewable energy & solar PV
- EV charging stations

Water

- Reverse-osmosis desalination
- Filtration & chemical treatment
- Smart, solar-powered operations

Presence Across Africa & the Middle East

Actual presence and markets under study across Africa & the Middle East — extending TAQA's integrated energy model well beyond Egypt.

Reach & Scale

Mobile CNG

01

Off-grid natural gas via mobile virtual pipeline — zero infrastructure capex.

Electricity Distribution

02

Turnkey MV/LV networks, smart metering and licensed lifetime O&M.

Gas Distribution

03

End-to-end gas network EPC — design, build, commission and operate.

CHP

04

Combined Heat & Power — up to ~85% efficiency from a single fuel input.

Solar

05

Tailored solar PV via PPA — clean power below grid tariffs, no capex.

Energy Storage (BESS)

06

Battery storage for peak shaving, solar firming and backup power.

TAQA funds, builds, owns & operates the asset.

You pay only for the gas you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Mother station & compression · CNG / virtual-pipeline trailers · On-site decompression & PRMS skid · Industrial metering & controls · BOO / BOOT financing

2 THE PROCESS — STEP BY STEP

- 1 Gas is compressed at a TAQA mother station to ~250 bar.
- 2 Trailers deliver it to your plant as a virtual pipeline.
- 3 On-site skids decompress and regulate to process pressure.
- 4 Metered gas feeds boilers, furnaces and process lines.
- 5 TAQA tracks usage and refills ahead of demand.

3 WHAT YOU RECEIVE

- Pipeline-grade gas without a pipeline
- Continuous feed for industrial processes
- Managed supply and refills

**Gas,
off-grid**

VALUE PROPOSITION

WHAT YOU GAIN

Off-Grid Gas Supply

Reliable natural gas to The Factory without pipeline access.

Cost Savings vs. Diesel & LPG

≈40% lower fuel cost than diesel; replaces LPG and electric heating across the development.

Cleaner Emissions

Cuts CO₂ by ~24% vs. diesel and lowers NO_x & particulates — supports ESG and green-rating targets.

99.5% Uptime SLA

SCADA-monitored hot-swap replenishment guarantees uninterrupted supply to every Factory.

TAQA ARABIA EDGE

Flexible Delivery Approach

BOO / BOOT or EPC via Capacity-as-a-Service — no upfront infrastructure cost for the Factory developer.

Nationwide Logistics Via Master Gas Stations

A dedicated trailer fleet keeps refills on schedule across governorates based on Master Gas segregated stations across Egypt

Scalable to Any Load

Starter (500 Nm³/day) to Heavy (5,000+ Nm³/day) — scales with occupancy, bridges to grid later.

Reliability & Smart O&M

24/7 predictive maintenance and rapid-response teams with guaranteed performance.

IMPLEMENTATION TIMELINE — START TO FINISH

DISCOVERY & AUDIT *Day 0-14*

Lead qualification, NDA, site visit and full technical load profiling — output is a precise demand curve and connection plan.

CONTRACTING *Day 8-14*

Capacity tier selection (Starter / Industrial / Heavy), CaaS pricing model, 99.5% uptime SLA and payment terms — output is a signed agreement.

DEPLOYMENT & GO-LIVE *Day 90-200*

MEGC mobilized, PRU adapter installed, SCADA activated, safety tests and switchover from diesel to live CNG supply.

Virtual Pipeline — 4 Governorates

First company in Egypt to supply natural gas through a mobile virtual pipeline

TAQA Arabia pioneered mobile CNG in Egypt, using its network of 86 CNG stations to extend a virtual pipeline into four governorates with no fixed gas infrastructure. The model now serves ceramics, glass, food-processing and other industrial clients — proving off-grid factories can run on clean natural gas years before the pipeline arrives.

86

CNG stations feeding the virtual pipeline

4

Governorates served off-grid

+2,350

mmscf CNG delivered per year

+10

Active mobile-CNG clients

TAQA funds, builds, owns & operates the asset.

You pay only for the electricity you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

HV / MV substations & switchgear · Distribution transformers · Cabling, protection & metering · SCADA & control room · BOO / BOOT financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA designs the zone network to factory load demands.
- 2 Substations, transformers and feeders are built and energized.
- 3 Power is distributed to every plot at the right voltage.
- 4 Smart meters bill each factory for its consumption.
- 5 A 24/7 control room keeps the zone powered and balanced.

3 WHAT YOU RECEIVE

- A licensed industrial power network
- Reliable supply to every factory
- Operation, metering and billing handled

**450 MVA
in zones**

VALUE PROPOSITION

WHAT YOU GAIN

Potential New Revenue Stream

The profit-share model turns the distribution network from a cost center into recurring income for the Factory.

Lower Factory Bills

Demand-side management and tariff optimization reduce consumption and end-user charges.

Guaranteed Power Quality

Stable, metered, billable electricity to every unit from handover — no reliance on stretched public utilities.

Future-Ready Network

Designed for solar, storage and EV loads from day one — the Factory scales without re-builds.

THE TAQA ARABIA EDGE

Flexible Delivery Approach

Take it as EPC build, licensed O&M, or a profit-share — TAQA flexes from substation to metering.

Faster Time-to-Handover

TAQA's licensing relationships and in-house engineering compress approvals, so units energize on schedule.

Single Accountable Operator

One licensed party owns sourcing, network, metering and O&M — no finger-pointing between contractors.

Reliability & Smart O&M

24/7 predictive maintenance and rapid-response teams with guaranteed SAIDI / SAIFI performance.

IMPLEMENTATION TIMELINE — START TO FINISH

Industrial Parks — 450 MVA

Powering Egypt's largest industrial parks and factories

TAQA Power operates +1,600 MVA of distribution capacity, of which 450 MVA serves 9 industrial-park concessions across 33 million m² — home to +500 factories, targeting 2,000. With developers such as IDG, Polaris, SDIC and CPC, TAQA has the licensing and O&M track record to run the power backbone of any industrial zone.

Factories served

TAQA funds, builds, owns & operates the asset.

You pay only for the gas you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

City-gate & PRMS stations · Steel distribution mains · Factory service lines · Industrial meters & regulators · BOO / BOOT financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA secures the concession and designs the gas grid.
- 2 Mains and service lines are laid across the zone.
- 3 Pressure is regulated to each factory's process needs.
- 4 Connections are metered, tested and commissioned.
- 5 TAQA operates, inspects and bills for gas delivered.

3 WHAT YOU RECEIVE

- A licensed industrial gas network
- Process-grade gas to every factory
- Lifetime O&M and emergency response

**6.4 BCM
per year**

VALUE PROPOSITION

WHAT YOU GAIN

Diesel & LPG Fuel-Switching

Manage the full transition from diesel and LPG to cleaner, cheaper natural gas.

Flexible Gas Sourcing — M-CNG or SNG

Where no fixed pipeline exists yet, gas is supplied via M-CNG (mobile CNG) or SNG — no Factory waits.

Lower Factory Bills

Subsidized piped natural gas is far cheaper than LPG cylinders or electric heating for residents.

Higher Asset Value

Connection to the national gas grid is a core industrial utility that lifts site value and tenancy.

THE TAQA ARABIA EDGE

Flexible Commercial Models

Delivered as EPC, long-term O&M or BOO — choose the structure that fits your balance sheet.

External & Internal Networks

TAQA builds the external distribution backbone and the internal Factory network.

One Partner Across all Phases

A single accountable party from feasibility to handover removes interface risk for the developer, In-house engineering arm EGUSCO builds the network to spec.

Standards Compliance

Aligned with IGEM, EGAS and international gas-safety standards, protect residents and de-risk approvals.

IMPLEMENTATION TIMELINE — START TO FINISH

PLAN & DESIGN *Day 0-70*

Feasibility study, network route planning across the site and full detailed engineering and design.

PROCURE & BUILD *Day 70-240*

Procurement of pipes, valves, meters and SCADA, then construction and installation of the distribution network.

COMMISSION & OPERATE *Day 240+*

Testing, commissioning and handover followed by licensed long-term distribution and metering operation.

+10,000 km Network — 8 Governorates

Egypt's largest private gas distributor, serving industry nationwide

TAQA Gas operates a network exceeding 10,000 km across 8 governorate concessions, renewed for 15 years since 2019. With 6.4 BCM of natural gas distributed annually and a 66% share of private gas concessions, it has the EPC and operating track record to build and run the gas backbone of any industrial zone.

+10,000
km of gas network

6.4 BCM
Gas distributed per year

8
Governorate concessions (15-yr)

66%
Of private gas concessions

1 TAQA INVESTS THE CAPEX

Gas engine / turbine genset · Waste-heat recovery unit · Absorption chiller (tri-gen) · Grid sync, controls & SCADA · BOO / BOOT plant financing

2 THE PROCESS — STEP BY STEP

- 1 Natural gas feeds the on-site engine or turbine.
- 2 The genset generates electricity for your plant.
- 3 Exhaust and jacket heat are captured, not wasted.
- 4 Recovered heat becomes steam, hot water — and cooling via chiller.
- 5 Controls sync to the grid and match output to your load.

3 WHAT YOU RECEIVE

- On-site power plus steam, hot water & cooling
- Up to ~85% total fuel efficiency
- One fuel input, three energy outputs

**~85%
efficiency**

TAQA funds, builds, owns & operates the asset.

You pay only for the power & heat you use — little to no upfront CapEx.

VALUE PROPOSITION

WHAT YOU GAIN

Lower Energy Costs

A single fuel input delivers both electricity and thermal energy, cutting unit costs.

High Overall Efficiency

Up to ~85% efficiency by capturing waste heat that would otherwise be lost.

Flexible Thermal Outputs

Steam, hot water, chilled water or direct heat — matched to process needs.

Reduced CO₂ Emissions

Higher fuel utilization translates into a smaller carbon footprint per unit of output.

THE TAQA ARABIA EDGE

Flexible Commercial Models

Delivered as EPC, long-term O&M or BOO — choose the structure that fits your balance sheet.

Integrated Gas + CHP Solution

TAQA can supply both the natural gas and the CHP plant, creating a single accountable provider for both fuel and energy production

Guaranteed Performance

TAQA's O&M and performance guarantees keep the system running at peak efficiency.

Reliability & Smart O&M

24/7 predictive maintenance and rapid-response teams with guaranteed SAIDI / SAIFI performance.

IMPLEMENTATION TIMELINE — START TO FINISH

AUDIT & DESIGN *Day 0-60*

Power and thermal load profiling, CHP sizing and tri-generation configuration matched to the plant's process needs.

FINANCE & BUILD *Day 45-270*

BOO/BOOT structuring with performance guarantee, procurement of gensets, heat-recovery and chillers, installation, grid sync and commissioning.

OPERATE *Day 270+*

Performance-guaranteed long-term operation and maintenance keeping efficiency at peak.

Captive Power & Cogeneration

Owning and operating high-efficiency captive generation

TAQA Power owns and operates 6 captive power plants and +150 MW of contracted generation through long-term agreements, including flare-to-power and combined-heat-and-power systems. The same engineering, fuel-logistics and 24/7 O&M discipline underpins TAQA's CHP offering for industrial clients.

6

Captive power plants operated

+150

24/7

Performance-guaranteed O&M

Power Source (Grid/Solar) → Distribution → Factory EV/Forklift Charging (Source → Delivery)

TAQA funds, builds, owns & operates the asset.

You pay only for the solar power you use — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Rooftop & ground-mount PV · Inverters & transformers · Connection & net-metering works · Monitoring & SCADA · BOO / BOOT financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA assesses roof, land and the plant's load curve.
- 2 PV arrays and inverters are installed and grid-tied.
- 3 Panels generate clean power across the working day.
- 4 Solar offsets daytime process and facility loads.
- 5 TAQA monitors yield and maintains the system.

3 WHAT YOU RECEIVE

- On-site solar cutting daytime grid draw
- Lower, hedged energy cost
- Monitored, maintained PV assets

Daytime savings

VALUE PROPOSITION

WHAT YOU GAIN

Lower Energy Bills

Solar's cost per kWh sits well below the grid tariff — Factory save from day one.

Tariff-Hike Hedge

Lock in clean-energy cost for decades and insulate the Factory from grid-price escalation.

Higher Property Value

Solar-equipped, lower-running-cost homes command a premium and sell faster.

Green Living Credentials

Visible clean energy strengthens the community's ESG and sustainability story.

THE TAQA ARABIA EDGE

Egypt's Solar Pioneer

TAQA was the first national company to commercially operate a plot at the Benban solar park.

Flexible Models

CAPEX, BOOT/BOO or PPA — own it, transfer it over time, or buy cheaper solar under a zero-capex PPA.

Turnkey Engineering

Survey, design, supply, installation and grid tie-in delivered end-to-end by one partner.

Lifecycle O&M & Guarantee

Remote monitoring, maintenance and performance guarantees keep output high for 25+ years.

IMPLEMENTATION TIMELINE — START TO FINISH

Solar Development & Investment

Developing and investing in tailored solar across Egypt

TAQA Arabia develops, finances and operates solar PV assets under tailored PPA agreements, integrating solar with its power-distribution and storage offering. As Egypt's largest private power player, TAQA pairs solar with grid and CHP for a complete, lower-carbon industrial energy package aligned to Vision 2030.

BOO / BOOT

PPA models, no client capex

~1,000

24/7

Monitoring & O&M

SCOPE

TAQA funds, builds, owns & operates the asset.

You pay only for the stored energy you use — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Battery energy-storage units · Power-conversion system & inverters · Switchgear & grid interface · EMS & SCADA controls · BOO / BOOT financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA sizes storage to the plant's load and tariff profile.
- 2 Battery units and conversion systems are installed.
- 3 Storage charges when power is cheap or solar is surplus.
- 4 It discharges to shave peaks and bridge outages.
- 5 An energy-management system optimizes every cycle.

3 WHAT YOU RECEIVE

- Peak shaving and lower demand charges
- Backup through grid disturbances
- Stored surplus from solar or off-peak

**Peak-shave
power**

VALUE PROPOSITION

WHAT YOU GAIN

Peak-Demand Savings

Discharge stored energy during peak hours to slash demand charges and tariff exposure.

Uninterrupted Production

Instant-response backup protects critical lines and avoids costly downtime during outages.

Grid Services Revenue

Frequency regulation and load balancing can create new value streams.

Future-Proof & Green

Enables deeper renewable integration and supports the plant's decarbonization roadmap.

THE TAQA ARABIA EDGE

Flexible Models

CAPEX, BOOT/BOO or PPA — own it, transfer it over time, or buy cheaper solar under a zero-capex PPA.

Smart Energy Management

EMS analytics optimize charge/discharge automatically against tariffs and loads.

Lifecycle O&M & Guarantee

Remote monitoring, maintenance and performance guarantees keep output high for 25+ years.

One Energy Stack

Storage, solar, power and gas from a single provider.

Energy Storage (BESS): Implementation Timeline

IMPLEMENTATION TIMELINE — START TO FINISH

Solar-Plus-Storage Integration

Integrating storage with solar and distribution for round-the-clock clean power

As Egypt's largest private power player, TAQA Arabia pairs Battery Energy Storage with its solar and distribution assets to deliver dispatchable, lower-carbon energy. Storage lets industrial clients shift solar into the evening, shave peaks and secure supply — the natural next step in TAQA's integrated energy model.

Peak shaving

Cuts costly demand charges

Solar firming

Day-to-night energy shift

BOO / BOOT

No client capex

24/7

EMS monitoring & O&M

Why One Partner: The TAQA One-Stop-Shop

From Fragmented Vendors to a Single Operator

One SLA

A single service-level agreement governs gas, power, CHP, solar and storage — one uptime guarantee, one renewal.

One Communication Point

A single account team and 24/7 hotline for every utility — no chasing multiple contractors.

One Commercial Relationship

Consolidated billing, aligned contract terms and a single negotiation instead of separate procurement cycles.

One Engineering Standard

Utilities designed to interoperate from day one — shared infrastructure, metering and monitoring.

One Accountable Owner

End-to-end responsibility removes interface risk and finger-pointing between specialised vendors.

The Power of the Bundle: Cross-Solution Benefits

How combining the solutions under one SLA creates value no single vendor can match

Solar + Storage

BESS stores daytime solar and dispatches it after sunset — pushing self-consumption and PPA savings far higher.

Solar + Distribution

On-site solar feeds the TAQA-built network directly, lowering the plant's blended power cost.

CHP + Gas

TAQA's gas network fuels the CHP plant — one partner supplies the fuel and the cogeneration asset.

Storage + Distribution

BESS shaves peak demand on the distribution network, cutting the most expensive part of the bill.

Gas + Mobile CNG

Mobile CNG bridges supply until the permanent gas network goes live — no production gap.

Shared O&M & Monitoring

One control room and field team monitor every utility — pooled spares, pooled response, lower unit cost.

Sold as one SLA: lower combined energy cost · shared infrastructure · one billing & monitoring platform · stronger ESG / decarbonisation story · single accountable operator for the entire site's energy backbone.

Success Story: Integrated Industrial Energy

One site, multiple TAQA solutions, one accountable operator

Across Egypt's industrial parks, TAQA Arabia combines gas distribution, private power distribution and on-site generation into a single, integrated energy system for factories — supplying the fuel, building the network and running the assets under one relationship. It is the clearest proof of the

Solutions combined on one site.
