

TAQA Arabia

Residential Customers

Integrated Energy & Utility Solutions • Jan 2026

A World of Energy, Delivered End-to-End

- Founded in 2006 and listed on the EGX since 2023, TAQA Arabia is Egypt's largest private-sector energy and utility developer.
- Across four divisions — Gas, Power, Petroleum and Water — TAQA finances, builds, owns and operates the utility backbone of residential communities, industrial zones and touristic destinations.
- For a residential developer, that means one accredited partner can deliver gas, electricity, water, back-up power and EV charging under a single relationship.

Active member of the International Gas Union (IGU)

Accredited by the IGEM (Institution of Gas Engineers & Managers)

Gas

- Gas distribution & EPC networks
- NGV stations & car conversion
- Mobile CNG & LNG (virtual pipeline)

Petroleum

- Oil-marketing stations & terminals
- Lubricants retail & distribution
- Bulk fuel storage & logistics

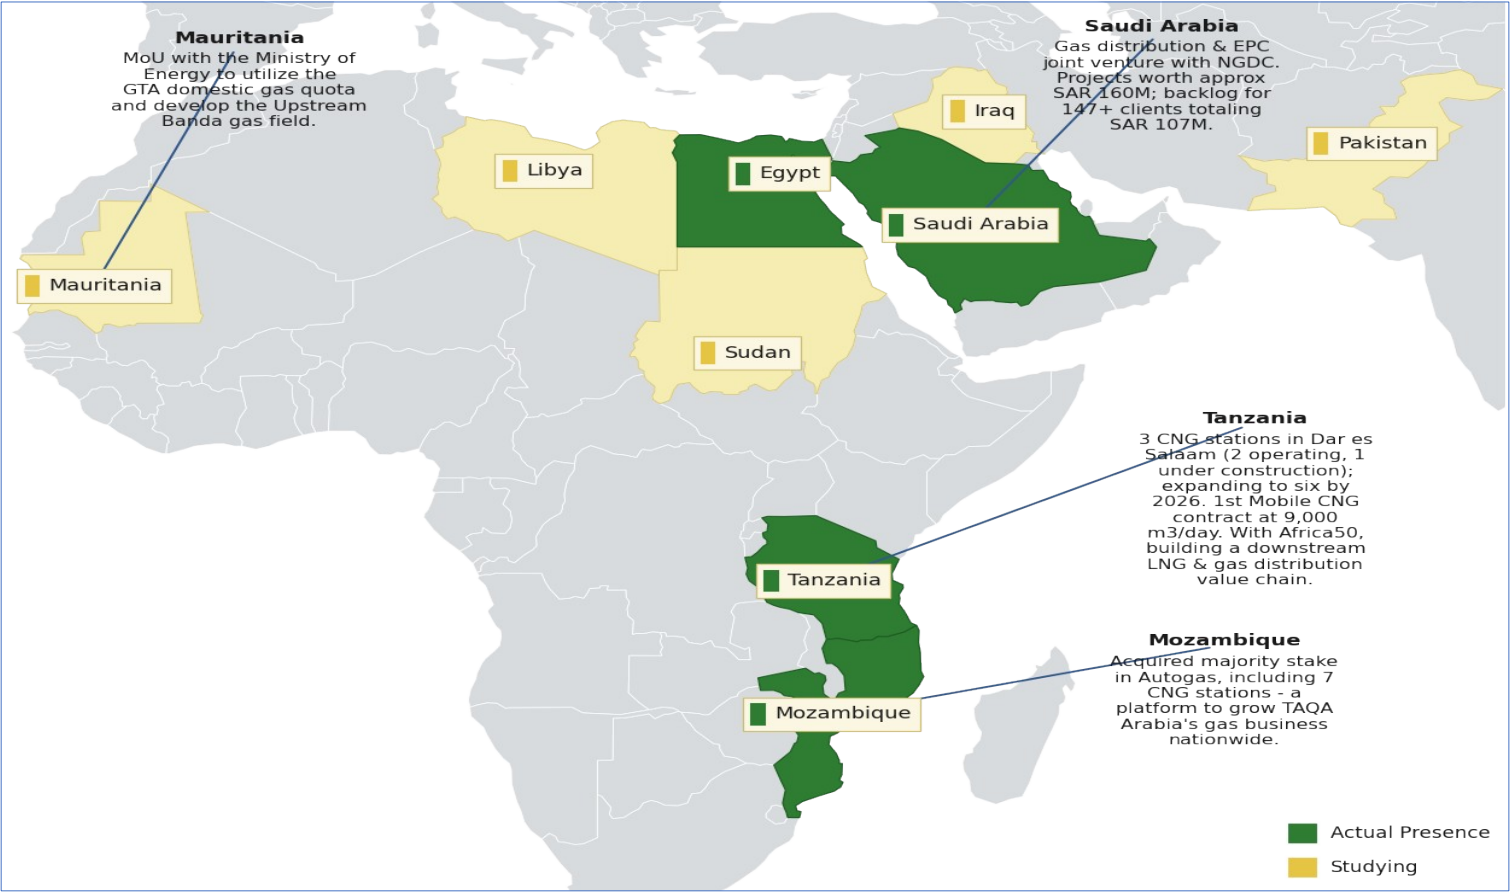

Power

- Generation & distribution (+1,600 MVA)
- Renewable energy & solar PV
- EV charging stations

Water

- Reverse-osmosis desalination
- Filtration & chemical treatment
- Smart, solar-powered operations

Presence Across Africa & the Middle East

Actual presence and markets under study across Africa & the Middle East — extending TAQA's integrated energy model well beyond Egypt.

Mobile CNG **01**

Off-grid natural gas delivered via mobile virtual pipeline — zero infrastructure capex.

Gas Distribution **04**

End-to-end gas network EPC — design, build, commission and operate.

Electricity Distribution **02**

Turnkey MV/LV networks, smart metering and licensed lifetime O&M.

Diesel Rental **05**

Emergency & back-up power gensets on a flexible rental / OPEX model.

Solar PV **07**

Rooftop and common-area solar PV — cutting bills, with flexible ownership.

Water Desalination **03**

Reverse-osmosis plants and digitalized, solar-powered water operations.

EV Chargers **06**

AC, DC and golf-car charging with full-investment green-mobility services.

TAQA funds, builds, owns & operates the asset.

You pay only for the gas you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Mother station & compression skids · CNG / virtual-pipeline trailers · On-site decompression & PRMS skid · Metering, odorization & safety controls · BOO / BOOT asset financing

2 THE PROCESS — STEP BY STEP

- 1 Gas is compressed at a TAQA mother station to ~250 bar.
- 2 CNG trailers haul it to your community as a virtual pipeline.
- 3 On-site skids decompress and regulate gas to delivery pressure.
- 4 Odorized, metered gas flows to homes and amenities.
- 5 TAQA monitors volumes and refills before you run low.

3 WHAT YOU RECEIVE

- Piped-quality gas with no physical pipeline
- Reliable supply to off-grid compounds
- Seamless switch-over once the grid arrives

**Grid gas,
no grid**

VALUE PROPOSITION

WHAT YOU GAIN

Off-Grid Gas Supply

Reliable natural gas to communities without pipeline access — compounds, resorts and remote developments.

Cost Savings vs. Diesel & LPG

≈40% lower fuel cost than diesel; replaces LPG and electric heating across the development.

Cleaner Emissions

Cuts CO₂ by ~24% vs. diesel and lowers NO_x & particulates — supports ESG and green-rating targets.

99.5% Uptime SLA

SCADA-monitored hot-swap replenishment guarantees uninterrupted supply to every home.

TAQA ARABIA EDGE

Flexible Delivery Approach

BOO / BOOT or EPC via Capacity-as-a-Service — no upfront infrastructure cost for the community developer.

Nationwide Logistics Via Master Gas Stations

A dedicated trailer fleet keeps refills on schedule across governorates based on Master Gas segregated stations across Egypt

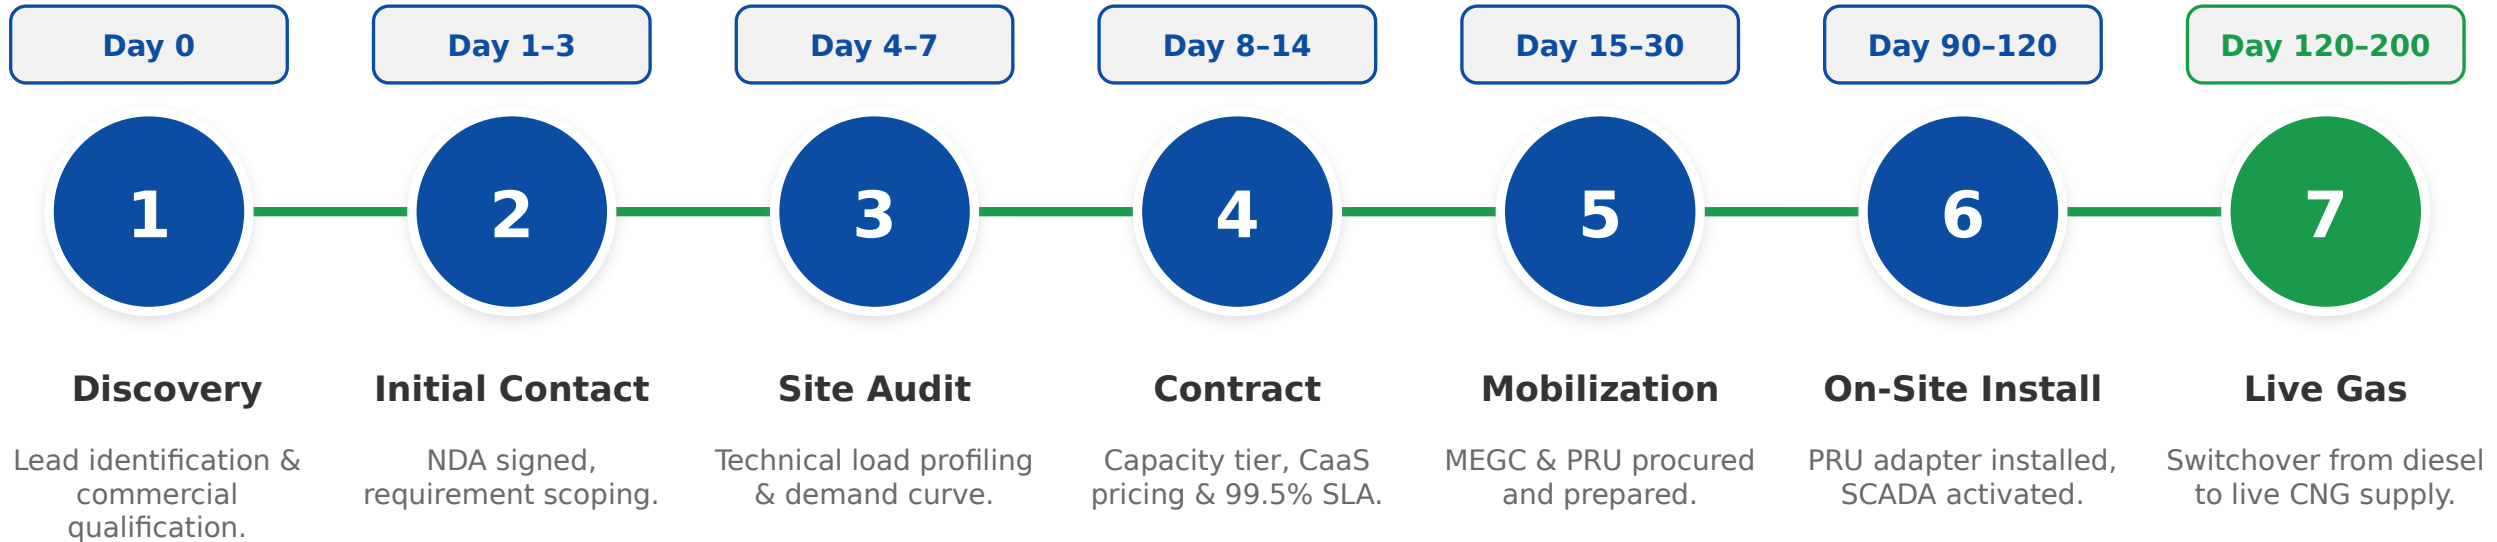

Scalable to Any Load

Starter (500 Nm³/day) to Heavy (5,000+ Nm³/day) — scales with occupancy, bridges to grid later.

Reliability & Smart O&M

24/7 predictive maintenance and rapid-response teams with guaranteed performance.

IMPLEMENTATION TIMELINE — START TO FINISH

DISCOVERY & AUDIT *Day 0-14*

Lead qualification, NDA, site visit and full technical load profiling — output is a precise demand curve and connection plan.

CONTRACTING *Day 8-14*

Capacity tier selection (Starter / Industrial / Heavy), CaaS pricing model, 99.5% uptime SLA and payment terms — output is a signed agreement.

DEPLOYMENT & GO-LIVE *Day 90-200*

MEGC mobilized, PRU adapter installed, SCADA activated, safety tests and switchover from diesel to live CNG supply.

El-Kharga — Virtual Pipeline City

El-Kharga: the first Egyptian city to run entirely on natural gas

In the New Valley Governorate — far from any fixed gas grid — TAQA Arabia became the first to run an entire city on natural gas, trucking CNG through its mobile virtual pipeline. The roll-out scales to serve up to 14,000 households at completion, proving an off-grid city can live on clean natural gas years before a physical pipeline arrives.

Active mobile-CNG clients

TAQA funds, builds, owns & operates the asset.

You pay only for the electricity you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

MV / LV substations & ring-main units · Distribution transformers · Cabling, switchgear & protection · Smart meters & SCADA · BOO / BOOT network financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA designs the network to the community's load and master plan.
- 2 Substations, transformers and cabling are built and energized.
- 3 Power is stepped down and distributed to every plot and amenity.
- 4 Smart meters record each unit consumed per household.
- 5 SCADA and a 24/7 team keep the network balanced and online.

3 WHAT YOU RECEIVE

- A fully built, licensed power network
- Metered electricity to every home
- 24/7 operation, faults and billing handled

**Plug-and-play
grid**

VALUE PROPOSITION

WHAT YOU GAIN

Potential New Revenue Stream

The profit-share model turns the distribution network from a cost center into recurring income for the developer.

Lower Resident Bills

Demand-side management and tariff optimization reduce consumption and end-user charges.

Guaranteed Power Quality

Stable, metered, billable electricity to every unit from handover — no reliance on stretched public utilities.

Future-Ready Network

Designed for solar, storage and EV loads from day one — the community scales without re-builds.

THE TAQA ARABIA EDGE

Flexible Delivery Approach

Take it as EPC build, licensed O&M, or a profit-share — TAQA flexes from substation to metering.

Faster Time-to-Handover

TAQA's licensing relationships and in-house engineering compress approvals, so units energize on schedule.

Single Accountable Operator

One licensed party owns sourcing, network, metering and O&M — no finger-pointing between contractors.

Reliability & Smart O&M

24/7 predictive maintenance and rapid-response teams with guaranteed SAIDI / SAIFI performance.

BUILD & METER *Day 75-300*

MEP approvals, value engineering, network construction, and supply/installation of the smart power & water metering platform.

OPERATE *Day 300+*

Licensed long-term O&M of the distribution network and meters with 24/7 predictive maintenance and guaranteed reliability.

Mixed-Use Compounds — 950 MVA

Powering Egypt's leading residential and mixed-use developments

TAQA Power operates +1,600 MVA of distribution capacity, of which 950 MVA serves 26 mixed-use and residential concessions across 31 million m². Its NABQ (160 MVA) and 6th of October Developers (250 MVA) substations anchor a network serving developers such as Emaar, Ora, City Edge, Marakez and LMD — currently +12,000 customers,

You pay only for the water you use — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Intake & pre-treatment system · Reverse-osmosis desalination trains · Post-treatment & storage tanks · Pumping, distribution & smart meters · BOO / BOOT plant financing

2 THE PROCESS — STEP BY STEP

- 1 Seawater or brackish water is drawn in and pre-treated.
- 2 Reverse-osmosis membranes remove salt and impurities.
- 3 Clean water is remineralized to potable standard.
- 4 Treated water is stored, pumped and distributed to the community.
- 5 TAQA operates the plant and guarantees output quality.

3 WHAT YOU RECEIVE

- Potable water independent of the public network
- Guaranteed volume and quality
- Full plant operation and maintenance

**Your own
water source**

VALUE PROPOSITION

WHAT YOU GAIN

50% Lower Energy Use

Advanced energy-efficient desalination plus VSDs, peak-demand control and solar PV cut power use.

Seawater & Brackish Supply

Seawater RO for coastal compounds and brackish RO for inland cities like New Cairo & 6th of October.

Resident Experience

Dynamic billing, consumption analytics and real-time notifications via mobile app.

Sustainability & ESG Impact

Solar-powered desalination, brine management and a reduced freshwater-extraction footprint.

THE TAQA ARABIA EDGE

Flexible Commercial Models

Delivered as EPC, long-term O&M or BOO — choose the structure that fits your balance sheet.

Green-Rating Enabler

Solar-powered RO and brine management support LEED / green-community certification and ESG goals.

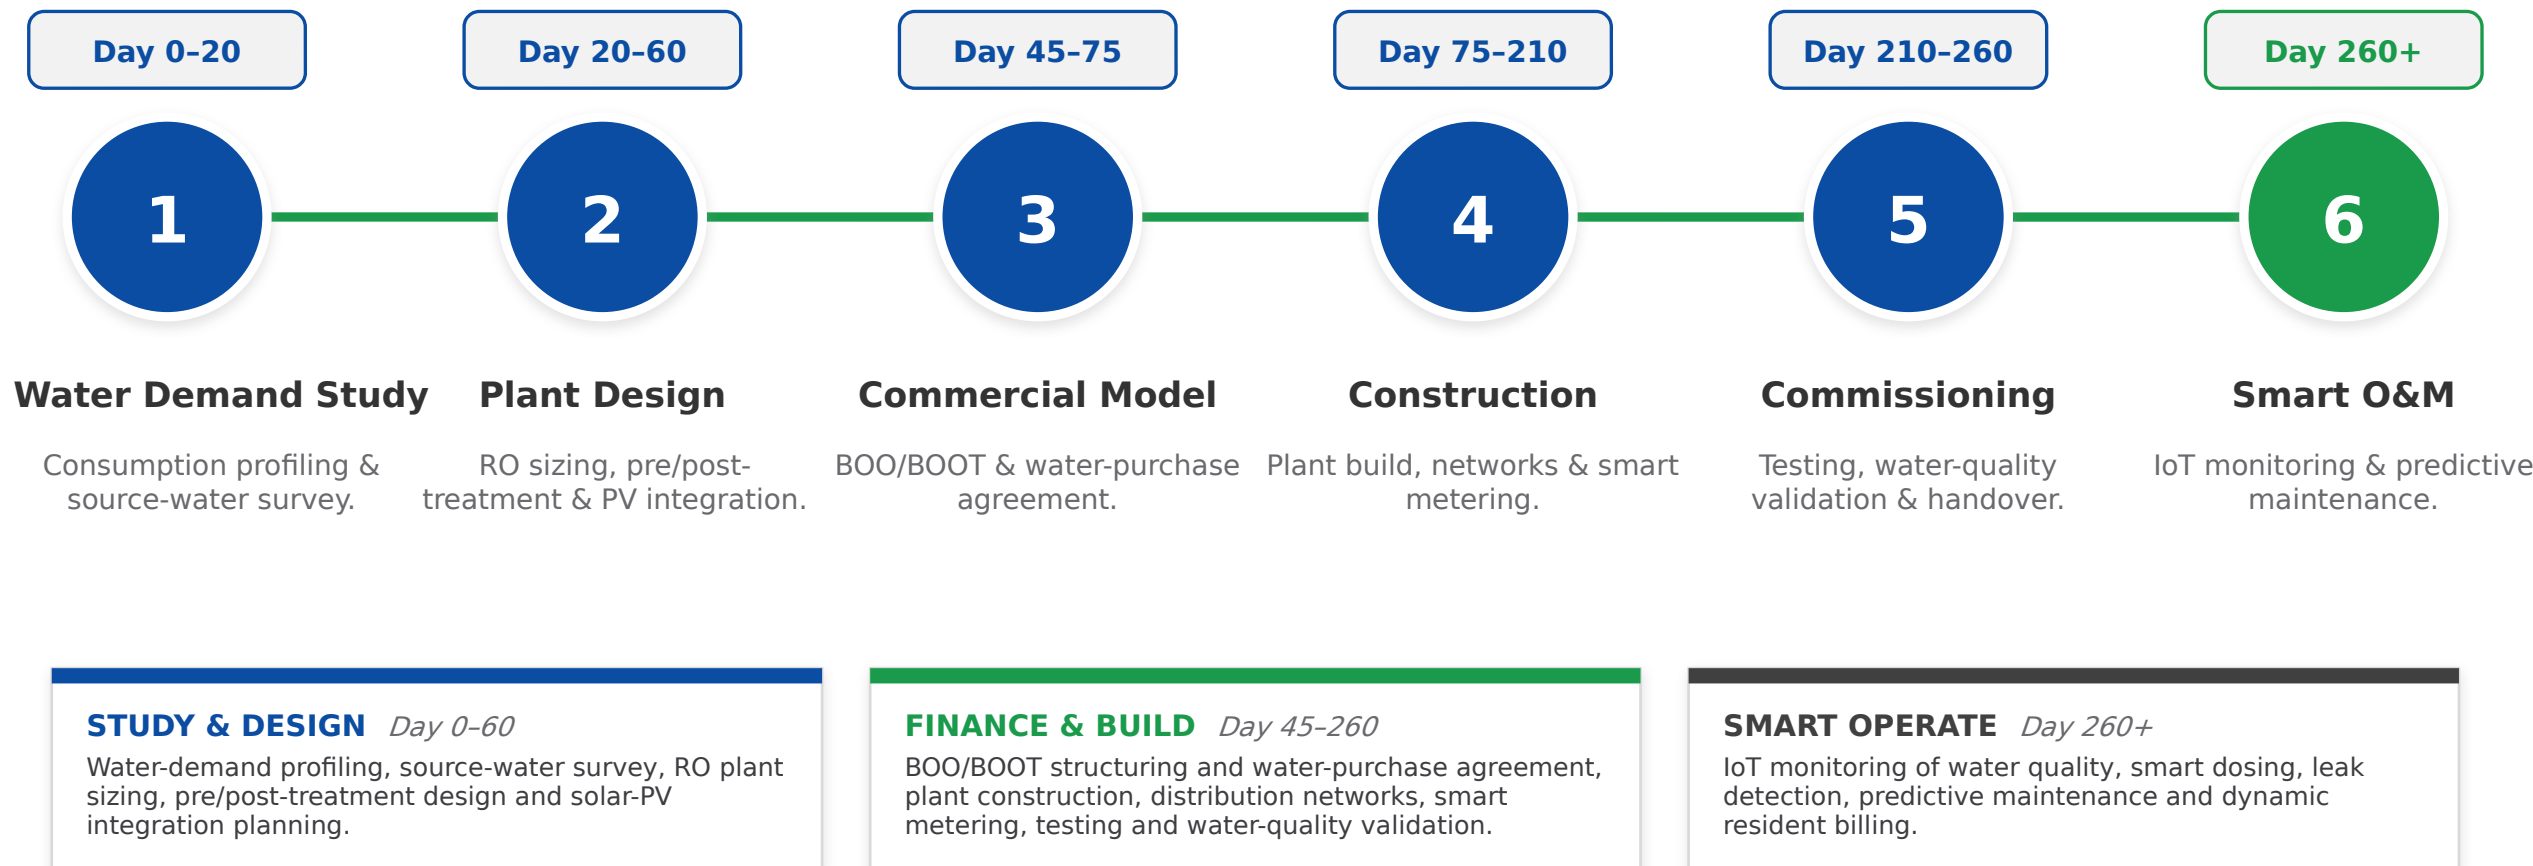

Scales With the Community

Modular RO trains add capacity in phases, matching plant output to real occupancy growth.

Smart Operations & Uptime

Real-time monitoring, leak & failure detection and predictive-maintenance dashboards.

IMPLEMENTATION TIMELINE — START TO FINISH

Soma Bay — Eco Solar Desalination

Egypt's first & largest eco solar-powered water-desalination plant

On the Red Sea, TAQA Water built Egypt's first green desalination facility powered entirely by renewable energy, using technology that consumes 50% less power than peers. It serves 50,000+ people in the Red Sea Governorate and cuts CO₂ by 8,560 tonnes a year — winning both Sustainable Project of the Year and Power & Water Project of the Year.

+47,000

You pay only for the gas you consume — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

City-gate & pressure-reduction stations · Steel & PE distribution mains · Service lines to each home · Domestic meters & regulators · BOO / BOOT network financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA secures the concession and designs the gas network.
- 2 Mains and service lines are laid across the community.
- 3 Pressure is regulated down to safe domestic levels.
- 4 Each home is connected, metered and commissioned.
- 5 TAQA operates, inspects and bills for the gas delivered.

3 WHAT YOU RECEIVE

- A licensed piped-gas network
- Safe, metered gas to every home
- Lifetime operation and emergency response

**10,000+ km
network**

VALUE PROPOSITION

WHAT YOU GAIN

Diesel & LPG Fuel-Switching

Manage the full transition from diesel and LPG to cleaner, cheaper natural gas.

Flexible Gas Sourcing — M-CNG or SNG

Where no fixed pipeline exists yet, gas is supplied via M-CNG (mobile CNG) or SNG — no community waits.

Higher Asset Value

Connection to the national gas grid is a core industrial utility that lifts Community Assets' value and tenancy.

Lower Living Costs

Subsidized piped natural gas is far cheaper than LPG cylinders or electric heating for residents.

THE TAQA ARABIA EDGE

Flexible Commercial Models

Delivered as EPC, long-term O&M or BOO — choose the structure that fits your balance sheet.

External & Internal Networks

TAQA builds the external distribution backbone and the internal in-compound and in-building network.

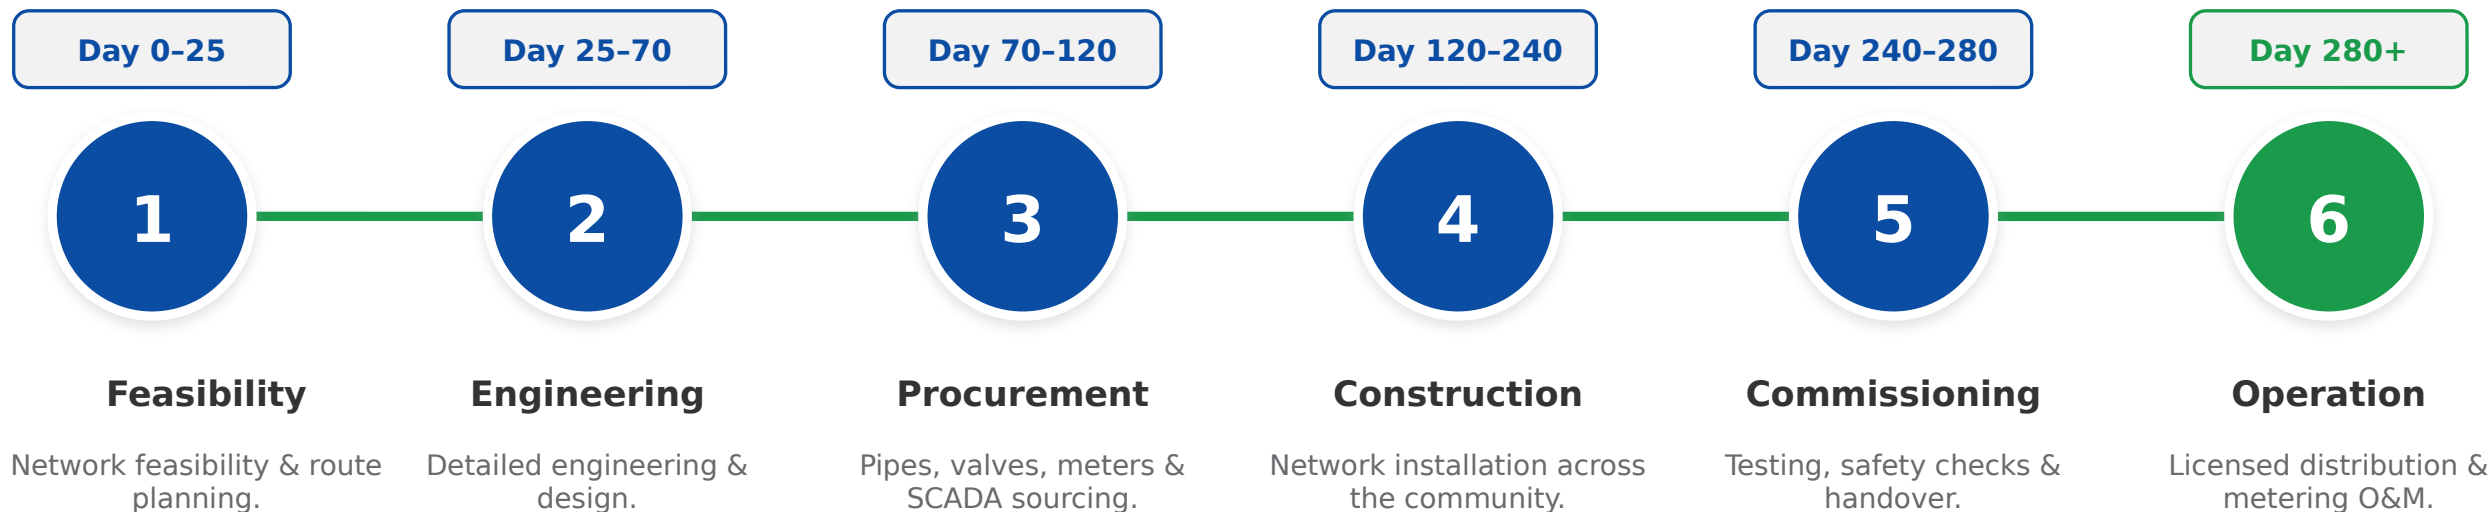

One Partner Across all Phases

A single accountable party from feasibility to handover removes interface risk for the developer, In-house engineering arm EGUSCO builds the network to spec.

Standards Compliance

Aligned with IGEM, EGAS and international gas-safety standards, protect residents and de-risk approvals.

IMPLEMENTATION TIMELINE — START TO FINISH

PLAN & DESIGN *Day 0-70*

Feasibility study, network route planning across the development and full detailed engineering and design.

PROCURE & BUILD *Day 70-240*

Procurement of pipes, valves, meters and SCADA, then construction and installation of the distribution network.

COMMISSION & OPERATE *Day 240+*

Testing, commissioning and handover followed by licensed long-term distribution and metering operation.

+10,000 km Network — 8 Governorates

Egypt's largest private gas distributor, serving ~6.5 million residential customers

TAQA Gas operates a network exceeding 10,000 km across 8 governorate concessions, renewed for 15 years since 2019. With ~6.5 million residential customers connected and a 66% share of private gas concessions, it has the EPC and operating track record to build and run the gas backbone of any new residential community.

You pay only for the power you draw — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Rental diesel generator sets · Fuel tanks & automatic transfer switch · Synchronization & distribution panels · Remote telemetry & monitoring · Fuel-supply logistics

2 THE PROCESS — STEP BY STEP

- 1 TAQA sizes gensets to the site's standby or prime load.
- 2 Units are delivered, installed and synchronized on site.
- 3 Generators start automatically on grid loss or demand.
- 4 TAQA manages refuelling, service and remote monitoring.
- 5 Units scale up or down as the project's needs change.

3 WHAT YOU RECEIVE

- Immediate, reliable backup or prime power
- Fuel, service and monitoring included
- Flexible capacity with no asset purchase

**Power on
day one**

VALUE PROPOSITION

WHAT YOU GAIN

Business / Community Continuity

Instant back-up power keeps lifts, pumps, lighting and amenities running through any outage.

Uninterrupted Living

Residents keep power to elevators, water pumps, security and common areas during grid failures.

Construction-Phase Power

Temporary power for the build site converts seamlessly into back-up power at handover.

Hands-Off Reliability

TAQA's 24/7 O&M, remote monitoring and rapid response remove the operating burden entirely.

THE TAQA ARABIA EDGE

Rental & OPEX Model

Rental and full-service options with guaranteed response SLAs — no capital outlay.

Rapid Deployment

Standardized gensets and skid solutions installed and commissioned fast.

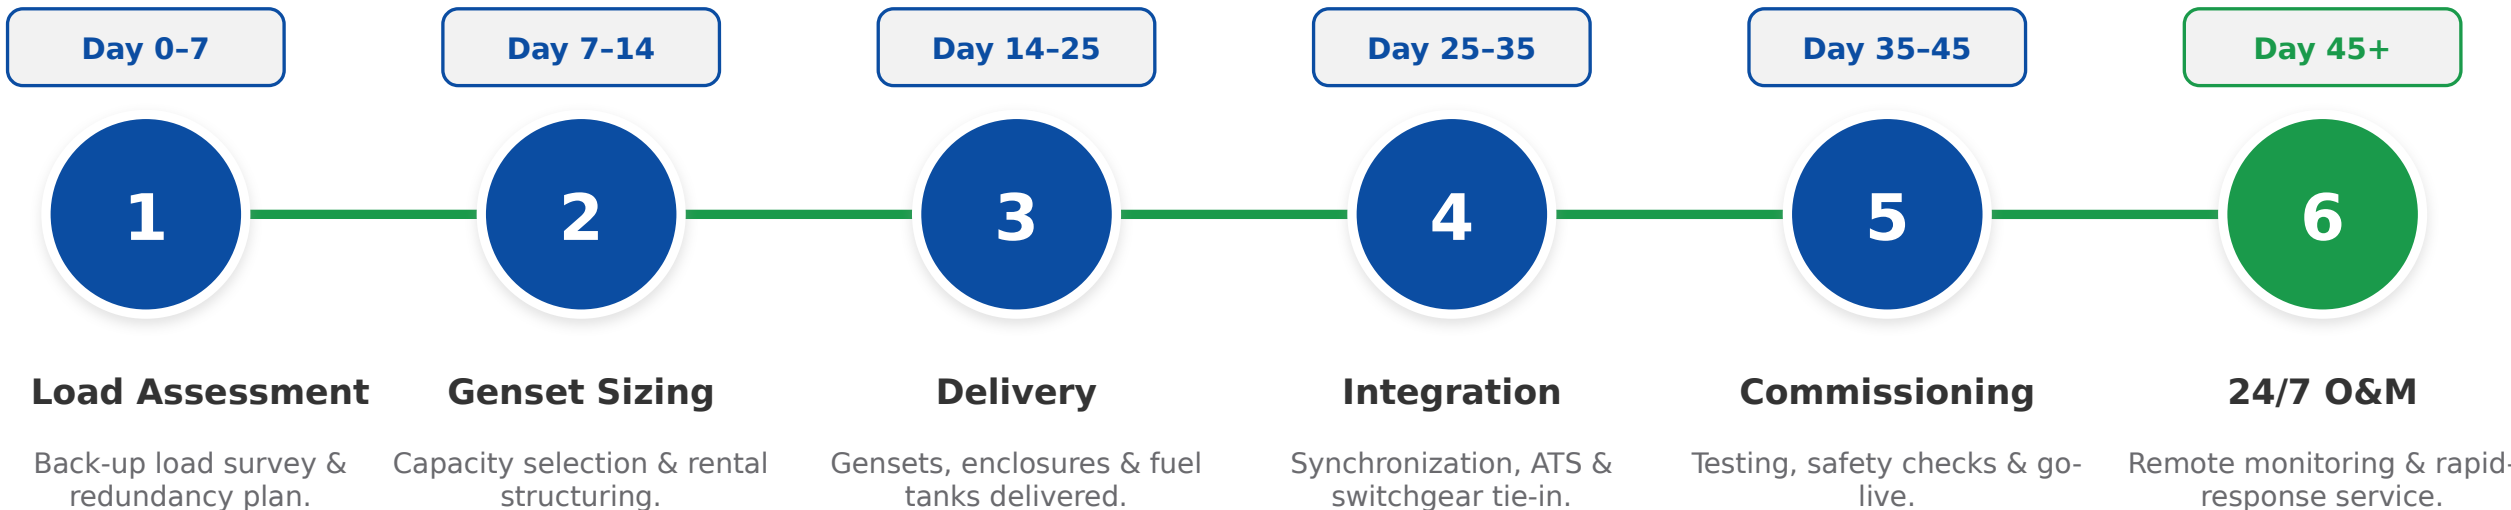

Flexible Capacity

Modular sizing from 500 kVA to 20 MVA — scale up or relocate as the development grows.

Bundled Transition

Bridges to permanent gas or grid power within one partner.

IMPLEMENTATION TIMELINE — START TO FINISH

ASSESS & SIZE *Day 0-14*

Back-up load survey, redundancy planning, genset capacity selection and rental / OPEX commercial structuring.

DEPLOY & INTEGRATE *Day 14-45*

Delivery of gensets, enclosures and fuel storage, synchronization, ATS and switchgear integration, testing and go-live.

OPERATE *Day 45+*

24/7 operation and maintenance with remote monitoring, predictive maintenance, spares and rapid-response SLAs.

Owning and operating captive generation across Egypt's toughest sites

TAQA Power owns and operates 6 captive power plants and +150 MW of contracted generation capacity through long-term agreements, including flare-to-power and combined-heat-and-power systems. The same engineering, fuel-logistics and 24/7 O&M discipline underpins TAQA's diesel back-up rental offering for residential communities.

You pay only for the energy you charge — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

AC & DC fast-charging units · Grid connection & upgrade works · Energy-management & load balancing · Payment, app & access platform · BOO / BOOT charger financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA assesses parking, demand and available grid capacity.
- 2 Chargers and any needed grid upgrades are installed.
- 3 Smart load-management shares power across charging points.
- 4 Residents authenticate and charge via app or RFID.
- 5 TAQA operates, maintains and settles payments.

3 WHAT YOU RECEIVE

- A ready community charging network
- Seamless app-based charging & billing
- Maintained, future-ready infrastructure

**Charge
at home**

VALUE PROPOSITION

WHAT YOU GAIN

Full Charger Range

AC, DC fast and golf-car chargers cover every residential and resort mobility need.

Future-Proof Amenity

EV-ready parking is now a deciding factor for buyers — it differentiates and future-proofs the community.

Effortless Resident Experience

App-based charging, transparent billing and a 24/7 hotline make adoption simple for residents.

Hotline & Mobile App

24/7 TAQA hotline plus a user and operator app for seamless charging and management.

THE TAQA ARABIA EDGE

First EV License in Egypt

TAQA holds the first private EV-charging license in the country — a genuine first-mover advantage.

Lifecycle O&M & Uptime

Ongoing operation and maintenance keep every charger available and revenue-generating.

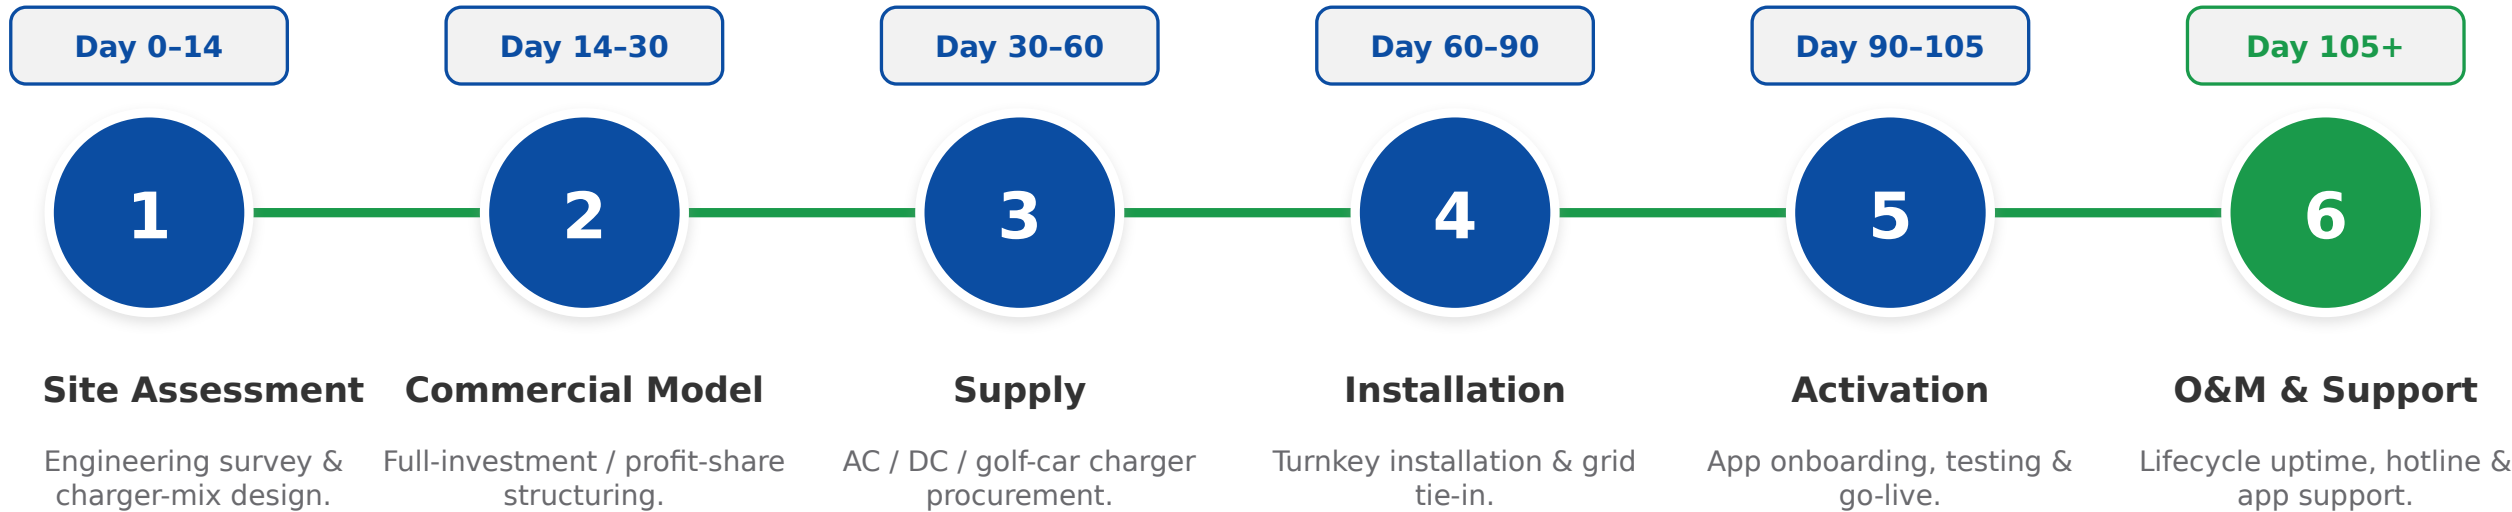

Flexible Financing options

TAQA Arabia invests in the Chargers or as Profit share Model turning charging into an income stream shared with the developer

Turnkey Engineering

Site assessment, design, supply and installation delivered end-to-end by one partner.

IMPLEMENTATION TIMELINE — START TO FINISH

ASSESS & STRUCTURE *Day 0-30*

Site engineering and charger-mix design (AC / DC / golf-car) plus commercial structuring under the full-investment profit-share model.

SUPPLY & INSTALL *Day 30-105*

Procurement of chargers, turnkey installation and grid tie-in, mobile-app onboarding, testing and go-live.

OPERATE & SUPPORT *Day 105+*

Lifecycle O&M and uptime management backed by the 24/7 TAQA hotline and the user / operator mobile application.

First EV License — Green Mobility

Pioneering Egypt's EV-charging rollout from the front

TAQA Power secured the first private EV-charging license in Egypt and is rolling out AC and DC charging across residential, commercial and highway locations, supported by its own operator and user mobile app and 24/7 hotline. As Egypt's largest private power player, TAQA pairs charging with on-site solar and distribution — a complete green-mobility package for any community.

6

End-to-end services offered

24/7

Hotline & app support

TAQA funds, builds, owns & operates the asset.

You pay only for the solar power you use — little to no upfront CapEx.

1 TAQA INVESTS THE CAPEX

Rooftop & carport PV arrays · Inverters & mounting structures · Net-metering & connection works · Monitoring & performance platform · BOO / BOOT solar financing

2 THE PROCESS — STEP BY STEP

- 1 TAQA studies roofs, shading and the community's load profile.
- 2 PV arrays and inverters are installed and grid-tied.
- 3 Panels generate clean power during daylight hours.
- 4 Solar offsets common-area and household consumption.
- 5 TAQA monitors yield and maintains the system.

3 WHAT YOU RECEIVE

- Clean on-site solar generation
- Lower common-area energy bills
- Monitored, maintained PV assets

Sun-powered savings

VALUE PROPOSITION

WHAT YOU GAIN

Lower Energy Bills

Solar's cost per kWh sits well below the grid tariff — residents and common areas save from day one.

Tariff-Hike Hedge

Lock in clean-energy cost for decades and insulate the community from grid-price escalation.

Uses Idle Space

Rooftops, car parks and unused land become productive, revenue-saving assets.

Strong ESG Credentials

Each 1 MWp avoids ~1,000 tons of CO₂ a year — measurable proof for sustainability reporting.

THE TAQA ARABIA EDGE

Egypt's Solar Pioneer

TAQA was the first national company to commercially operate a plot at the Benban solar park.

Flexible Models

CAPEX, BOOT/BOO or PPA — own it, transfer it over time, or buy cheaper solar under a zero-capex PPA.

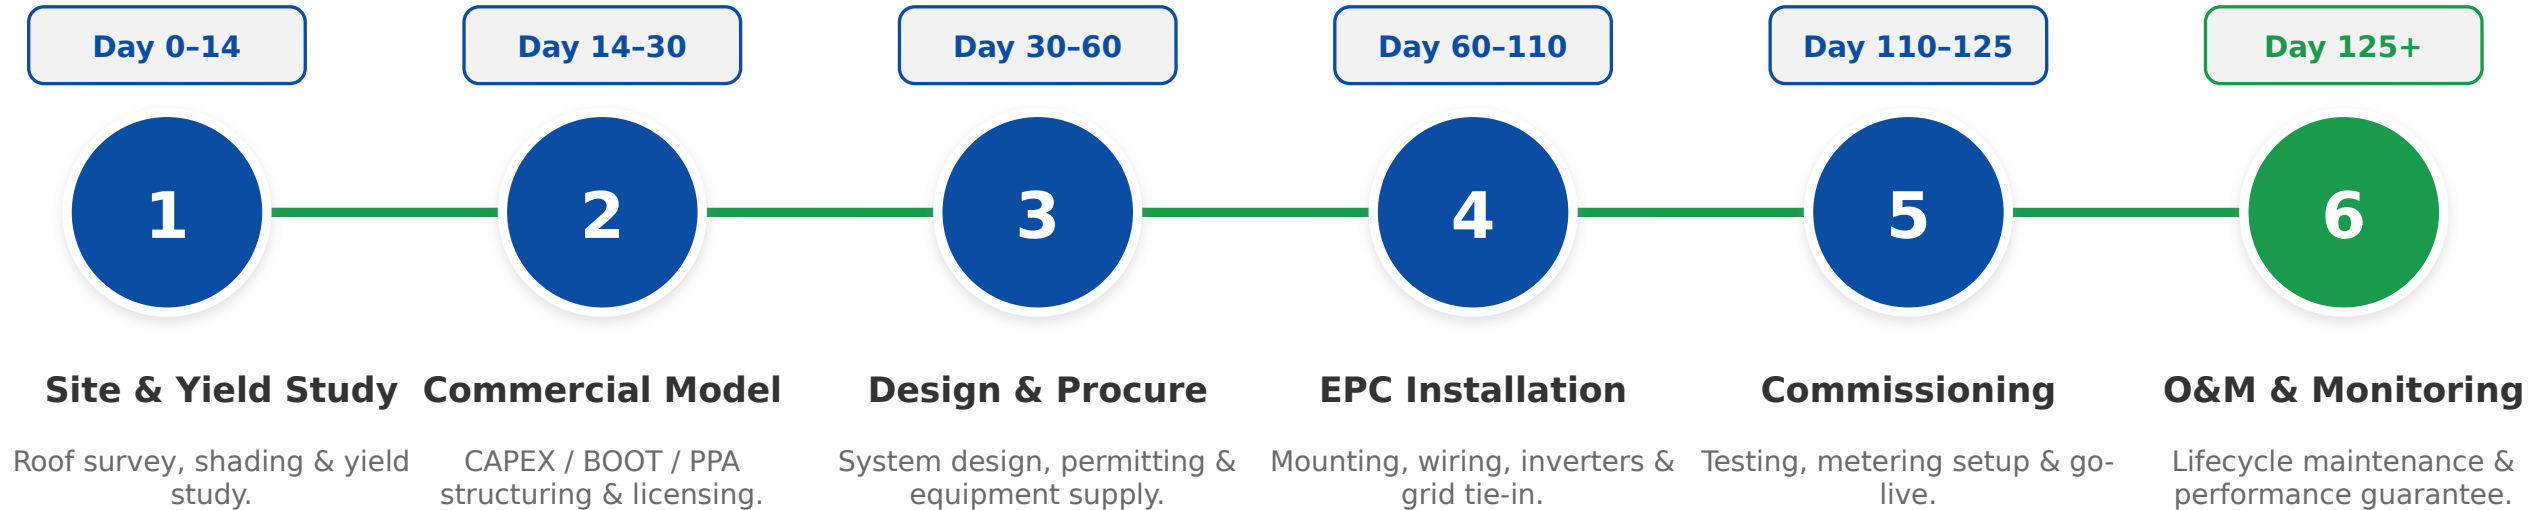

Turnkey Engineering

Survey, design, supply, installation and grid tie-in delivered end-to-end by one partner.

Lifecycle O&M & Guarantee

Remote monitoring, maintenance and performance guarantees keep output high for 25+ years.

IMPLEMENTATION TIMELINE — START TO FINISH

ASSESS & DESIGN *Day 0-30*

Site survey, shading and energy-yield study plus commercial structuring under CAPEX, BOOT/BOO or a zero-capex PPA, with self-consumption / net-metering licensing.

BUILD & CONNECT *Day 30-110*

System design, permitting, equipment procurement, EPC installation and grid tie-in to international standards.

OPERATE & GUARANTEE *Day 110+*

Commissioning, metering and go-live, then lifecycle O&M, remote monitoring and 25-year performance guarantees.

Powering a green, smart city with clean energy

TAQA Power built the largest solar plant in Sharm El-Sheikh — 20 MW across 250,000 m² — generating over 42 GWh a year, enough clean electricity for about 6,000 hotel rooms and 30% of the Nabq region's load, delivered in a record four months. As the first national company to commercially operate a plot at the Benban solar park, TAQA brings the same utility-scale expertise to residential rooftops and communities.

Why One Partner: The TAQA One-Stop-Shop

From Fragmented Vendors to a Single Operator

One SLA

A single service-level agreement governs gas, power, water, back-up and EV — one uptime guarantee, one penalty regime, one renewal.

One Communication Point

A single account team and 24/7 hotline for every utility — no chasing five contractors when something needs attention.

One Commercial Relationship

Consolidated billing, aligned contract terms and a single negotiation instead of six separate procurement cycles.

One Engineering Standard

Utilities designed to interoperate from day one — shared trenches, shared metering platform, shared monitoring.

One Accountable Owner

End-to-end responsibility removes interface risk and finger-pointing between specialised vendors.

The Power of the Bundle: Cross-Solution Benefits

Solar + Desalination

On-site solar PV powers the RO plant — Egypt's first eco green desalination model, cutting both energy cost and CO₂.

Solar + EV Charging

Community solar feeds EV chargers, lowering charging cost and maximising the green-mobility story for residents.

Distribution + Smart Metering

One metering platform bills electricity and water together — shared infrastructure, single resident app.

Gas + Mobile CNG

Mobile CNG bridges supply until the permanent gas network goes live — seamless handover, no diesel gap.

Diesel + Distribution

Back-up gensets integrate directly into the TAQA-built distribution network with automatic transfer — true redundancy.

Shared O&M & Monitoring

One control room and field team monitor every utility — pooled spares, pooled response, lower unit O&M cost.

Sold as one SLA: lower combined cost · shared infrastructure & trenches · one billing & monitoring platform · stronger ESG / green-rating story · single accountable operator for the entire community utility backbone.

Egypt's first & largest eco solar-powered desalination plant

At Soma Bay on the Red Sea, TAQA Arabia integrated solar generation, power distribution and reverse-osmosis desalination into a single, renewable-powered utility system — using technology that consumes 50% less power than its peers. It is the clearest proof of the bundled, one-SLA model serving a residential and touristic destination.
